Faraibe Khan

(631) 229 4146 | faraibekhan@gmail.com | LinkedIn |Github

PROFESSIONAL SUMMARY

Software Engineer with hands-on experience developing in application development, REST API integrations, and optimizing backend services. Proficient in Java, Python, Spring Boot, React, and SQL, with experience in API integration, debugging, and application development.

SKILLS

Languages: Java, Python, HTML/CSS, JavaScript, SQL

Frameworks & APIs: Spring Boot, REST APIs, JPA/Hibernate, JWT Authentication, React, FastAPI

Database and Libraries: PostgreSQL, SQLite

Developer Tools & Cloud: Git, GitHub, Postman, Docker, AWS

Soft skills: Problem-Solving, Communication, Collaboration, Adaptability, Time Management, Attention to Detail

EXPERIENCE

Independent Software Engineer, PharmaLingo May 2026 – Present

Remote

- Independently developed a pharmacy translation application using Python, React, and REST APIs to support real-time multilingual communication between pharmacy staff and patients.
- Integrated external translation services and implemented HTTP connection reuse, timeout handling, and multi-layer fallback mechanisms to improve application reliability.
- Developed a responsive React interface featuring translation history, favorites, and pharmacy-specific phrase matching to streamline translation workflows.
- Deployed the frontend on Vercel and a Docker-containerized backend on Render, managing application configuration, API integration, and troubleshooting.
- Delivered a working prototype for internal testing at 1 pharmacy, collaborating with 2–3 staff members to evaluate approximately 1–20 daily translation interactions and refine functionality ahead of production deployment.

Mobile App Developer Intern, Circl International Sept 2025 – May 2026

Remote

- Developed the company's first web application based on its existing mobile platform, serving a mobile user base of approximately 5,000 daily users across multiple continents.
- Integrated 8+ REST API endpoints to retrieve user information and support authentication workflows, improving connectivity between the application and existing backend services.
- Maintained a consistent user experience between mobile and web platforms by implementing shared functionality and improving navigation and interface behavior.
- Reduced iOS application crash rates by 15% through debugging production issues, conducting regression testing, and refactoring legacy Swift code.

Application and System Support, Bay Ridge Rx Aug 2022 – Present

New York

- Diagnosed and resolved recurring software and hardware issues across pharmacy management systems, POS terminals, barcode scanners, and payment-processing platforms to maintain daily operations.
- Configured application settings, performed software updates, and managed employee access permissions while troubleshooting connected hardware and software systems.
- Supported pharmacy technicians and staff by maintaining prescription-processing and inventory management systems, ensuring reliable technology operations in a high-volume pharmacy handling 100+ daily transactions.

PROJECTS

AutoMatch AI | GitHub | *Java, Spring Boot, PostgreSQL, REST APIs, React.js, Tailwind, CSS* Apr 2026 – May 2026

- Built a full-stack vehicle recommendation engine with Java and Spring Boot, implementing custom filtering algorithms to generate recommendations based on user budget and performance preferences.
- Developed REST API endpoints to process user preferences and manage relational data with PostgreSQL and JPA/Hibernate.
- Implemented JWT authentication to secure API endpoints and user access.

Mini ETL Pipeline | GitHub | *Python, Pandas, SQLite, REST APIs,SQL* Sept 2025 – Oct 2025

- Automated data extraction pipelines in Python, programmatically ingesting structured datasets from the Open Library REST API.
- Designed data transformation logic using Pandas to clean, filter, and normalize incoming records before loading into SQLite storage.
- Automated CSV exports for business reporting, reducing manual processing time by 90%.

EDUCATION

B.S. Information Systems | Brooklyn College Sept 2021 – Dec 2026
